

Ryzom - Bug # 1044

Status:	Closed	Priority:	High
Author:	kervalva	Category:	OS: GNU/Linux
Created:	07/31/2010	Assignee:	kervalva
Updated:	09/10/2010	Due date:	
Subject:	Window content is black after switching windowed <-> fullscreen		
Description	It's not happening everytime, but often when switching from fullscreen to windowed or windowed to fullscreen, window become black under Linux.		

History

#1 - 07/31/2010 01:27 pm - kervalva

On my PC, it's always happening when restoring old mode (switching back from fullscreen to windowed). But if I resize the window, it's working again.

#2 - 07/31/2010 01:55 pm - kervalva

After the window is becoming black, we can't resize anymore the right and bottom borders (cursor doesn't change) but top and left borders are ok.

#3 - 08/01/2010 12:14 am - kervalva

- Status changed from New to Assigned
- Assignee set to kervalva

#4 - 08/01/2010 09:50 am - kervalva

- Status changed from Assigned to Resolved
- % Done changed from 0 to 100

Applied in changeset r575.

#5 - 08/01/2010 02:26 pm - kervalva

- Target version set to Version 0.8.0

#6 - 08/22/2010 10:00 am - kervalva

There was 2 more bugs:

- when switching from a fullscreen mode to another one, window decorations were reappearing
- with some WM, XSendEvent is working if window is mapped or unmapped, but with other WM, it doesn't work
