Ryzom - Feature # 1085

Status:	New	Priority:	Low	
Author:	rti	Category:	OS: Mac	
Created:	08/28/2010	Assignee:		
Updated:	09/07/2010	Due date:		
Subject:	Create .framework and	Create .framework and .plugin instead of .dylib and .so on Mac OS		
Description				
The real Mac wa	ay is to have .framework folders o	tories and includes in include directo containing libraries and headers.	pries like on any other unix system.	
The drivers could	d fit into .plugin directories.			
I am not sure wh task.	nether this is really needed. It is the	he Mac style, but the unix way works	s very well too, so I assign low priority to this

Just stumbled upon this:

MESSAGE("Will compile OpenThreads.framework!") SET_TARGET_PROPERTIES(\${LIB_NAME} PROPERTIES FRAMEWORK TRUE

FRAMEWORK_VERSION \${OPENTHREADS_VERSION}

PUBLIC_HEADER "\${OpenThreads_PUBLIC_HEADERS}"

INSTALL_NAME_DIR "\${OSG_COMPILE_FRAMEWORKS_INSTALL_NAME_DIR}"

)

Might be interesting :)
