Subject:	Create a CMake macro to check if we should link to an external lib or not		
Description			
<p>Some Linux distributions packages don't use --no-undefined when compiling libs so they could miss some symbols and that's up to the application to manually link to missing libs.</p> <p>To avoid overlinking, we should create a macro which checks for some symbols and library names and tell if we need to manually link or not.</p>			

History

#1 - 10/04/2010 10:06 pm - kervalala

- % Done changed from 0 to 50

That's working under Linux at least :)

We need to check under Mac OS X.

#2 - 10/14/2010 07:02 pm - kervalala

- Status changed from Assigned to Resolved

- Target version set to Version 0.8.0

- % Done changed from 50 to 100

That's working too under Mac OS

#3 - 01/08/2011 06:54 pm - kervalala

- Status changed from Resolved to Closed
