Ryzom - Bug # 1189

Status: Priority: Normal New Author: Category: Tools: General aquiles Created: 11/13/2010 Assignee: aquiles **Updated:** 11/13/2010 Due date: Subject: changing image extensions in georges files from .tga to .png

Description

The assets image format is .png now but the georges files reference the old .tga files. I know there is the remapExtension stuff but its cleaner to change it correctly in the georges files. (Like AR_botte.tga -> AR_botte.png in icmalf.sitem)
