

Ryzom - Feature # 1203

Status:	New	Priority:	Normal
Author:	sfb	Category:	Client: General
Created:	11/24/2010	Assignee:	
Updated:	05/27/2012	Due date:	
Subject:	Replace LibWWW		
Description			
LibWWW is no longer a supported library in many distributions and is not actively developed any longer. We should consider replacing it.			

History

- File libwww_files_in_ryzom.txt added

I've attached a list of files, classes, and methods that would be affected by the switch. My limited knowledge of libwww prevents me from being positive I found all the classes and methods, but I'm sure of the files.

#2 - 12/07/2010 06:01 pm - JulFX

" [libcurl](#) is considered to be a modern replacement for [libwww.](#)" according to wikipedia.

As libcurl is not in ubuntu and other distro anymore, Ryzom may not be accept in official repository.

#3 - 12/07/2010 06:03 pm - JulFX

As ~~libcurl~~ libwww is not in ubuntu and other distro anymore, Ryzom may not be accept in official repository.

#4 - 12/07/2010 06:07 pm - kerval

I don't think libcurl is enough to replace completely libwww, we'll need too libxml2 module HTMLParser.

#5 - 07/16/2011 05:45 pm - Potlatch

What about POCO ? <http://pocoproject.org/index.html>

C++, has an XML parser based on expat, licensed under Boost Software License 1.0 which is listed as compatible with the GNU GPL

<http://www.gnu.org/licenses/license-list.html>
