Updated:	12/07/2011	Due date:	

Subject: Wrong NeL window position with Compiz

Description

With Compiz window manager, windows positions can be adjusted so we can't compute the decoration size with current method.

Instead, we should use `_NET_FRAME_EXTENTS` properties to get frame/decoration sizes.

This bug can be very annoying because Compiz can move a window to another desktop and user won't be able to see the window.
