I cant fully understand what to do.

It says to get xdelta.exe and the other file which I did but when I open them they close automatically after the open and this also happens when I open Patch_gen.exe

patch_gen and xdelta are command-line tools.

Use win+r keys and run 'cmd' command that opens up command-line window.

Then, if you want patch files to be in C:\RyzomCore, you need to first move to that directory by typing

```
cd C:\RyzomCore
```

and ENTER
