

## Ryzom - Bug # 1415

<b>Status:</b>	New	<b>Priority:</b>	Normal
<b>Author:</b>	sfb	<b>Category:</b>	Tools: General
<b>Created:</b>	12/21/2011	<b>Assignee:</b>	
<b>Updated:</b>	12/21/2011	<b>Due date:</b>	
<b>Subject:</b>	WebTT: Raw file import files to import files from a sub-directory on Windows.		
<b>Description</b>			
<p>WebTT is configured to point at the 'translation' folder from Ryzom which has a structure like this:</p> <ul style="list-style-type: none"><li>- translation<ul style="list-style-type: none"><li>- translated</li><li>- diff</li><li>- work</li></ul></li></ul> <p>If I import a raw file such as <i>wk.uxt</i> from a subfolder such as translated the file that it imports is "translated\wk.uxt". When you import this the URL becomes:</p> <p><a href="http://webtt.somewhere.com/admin/raw_files/import/translated\wk.uxt">http://webtt.somewhere.com/admin/raw_files/import/translated\wk.uxt</a></p> <p>The result is a 404 Not Found error because the \ breaks the parameter path. The file name needs to be sanitized for Unix-style paths before being appended to the 'Import' link.</p>
