Subject:	Right-click popup menu sometimes comes up during right mouse drag.		
Description			
<p>Windows 7 x64 in the ryzom.com game.</p> <p>When moving your character forward by holding down the forward keyboard key (in my case 'w') and using the mouse right-drag to change direction, sometimes the drag is spuriously canceled and the right-click popup menu ("Free Look" "Move") appears all on its own without lifting the right mouse button. This can also happen when you just press the right-mouse button without releasing when intending to start a drag. This behavior is unique to this game on my computer.</p> <p>The expected behaviors are:</p> <ul style="list-style-type: none">- If you press the right-mouse button, drag outside a defined small rectangle, and then release, only the direction change function should happen and the right-click popup menu should not appear at any time during the drag or after the right mouse button is released.- If you press the right-mouse button, while the button remains pressed the right-click popup menu should not appear regardless of whether the mouse has moved or not.- If you press the right-mouse button, do not drag the mouse outside a defined small rectangle, and then release, the right-click popup menu should appear. <p>Because of the technical nature of this problem, I was asked in-game by a CSR to report it here.</p>
