## Ryzom - Bug # 954

Status:	New	Priority:	Normal	
Author:	sfb	Category:	Client: General	
Created:	06/02/2010	Assignee:		
Updated:	06/05/2010	Due date:		
Subject:	Make all client sheets code a common library.			
Description				

At least one tool (sheets\_packer) uses the client\_sheets library directly but also requires the following source files directly from the client:

- code/ryzom/client/src/continent\_manager\_build.cpp
- code/ryzom/client/src/continent\_manager\_build.h
- code/ryzom/client/src/sheet\_manager.cpp
- code/ryzom/client/src/sheet\_manager.h

Move these four files to client\_sheets. There is the possibility that more tools and applications will arise that load the client sheets directly and thus may need these loaders as well. Optional:

- Move client\_sheets entirely to code/ryzom/common/src.
- Move client\_sheets code into a unique namespace.

## History

#1 - 06/05/2010 08:44 pm - vl

packed\_sheet are just a file caching system. Instead of loading thousand of xml files (sheets), it (client or services) generates a binary with only information it needs. if the packed\_sheets doesn't exist or is not up to date, it create/update the cache.

we don't need a tool that generate these files, it's the client or service system to do it.
