

Ryzom - Support # 1022

Status:	Rejected	Priority:	Normal
Author:	TomH	Category:	Build
Created:	07/16/2010	Assignee:	
Updated:	08/05/2010	Due date:	
Subject:	install file missing		
Description			
This may be similar or the same issue as http://dev.ryzom.com/issues/1021			

I was having a hard time compiling due to a lot of files that couldn't been found. After updating the source with the last revision I was able to go a lot further but now encounter something similar.			
<pre>/usr/bin/ld: cannot find -lnelnet collect2: ld returned 1 exit status make[2]: *** [logger_service] Error 1 make[2]: Target `all' not remade because of errors. make[1]: *** [logger_service-all] Error 2 make[1]: Target `night' not remade because of errors. make: *** [night] Error 2 ***** ***** ***** BUILD RYZOM FAILED ***** ***** ***** No email to send the error mail</pre>			
Tried a couple of solutions from the other issue, but didn't work.

Bug #1021 was related to CMake but you don't use it.

Do you have something in \$RYZOM_PATH/../../code/build/debug or \$RYZOM_PATH/../../code/build/release ?

#2 - 07/16/2010 04:48 pm - TomH

On `/home/source/ryzom/code/build/release`

```
./ config.log include/ Makefile samples/ tools/
../ config.status* libtool* nel-config src/
```

That's all I have, theres no debug folder at all within the `/ryzom/code/`
