I'd really much rather not add more sln/vcproj garbage into the repository. We're finally down to 1 set of them from the days when we have dsp/dsw, sln/vcproj and \_8.sln/\_8.vcproj. Lets not start this madness again. If you need something in the mean time let 2010 convert the projects and solutions or help us complete the CMake port. CMake should generate usable out-of-source solutions and projects for 2010 as long as you're running CMake 2.8.

I second that, it would be even be better to completely remove all .vcproj and .sln files BUT windows users are not used to coding and they need files to be able to load quickly (CMake could disturb them a lot).

If you want to use VC++ 2010, just use CMake to generate projects them and then tweak files if you need. When CMake files will be updated, your VC++ 2010 project too.

If we provide projects for 2005, 2008, 2010, etc... Each time we modify one file, we need to modify ALL projects :s It's a headache.
