Subject:	New Map for Ryzom		
Description			
http://maps.bmsite.net/			
I think it will be interesting to revisit world map used in Ryzom. (via touch M)			
Ballisticmystix.net use currently google map API to generate a satellite render of Ryzom's map. Is it possible to use world map editor tool to get the same result and finally increase them in futur patch?			

History

like this <http://core.bmsite.net/pocwe/ligomap.html> ?

ligomap is using newbieland.land and zonebitmaps/zoneligos.

but ryzom live map is <http://ballisticmystix.net/temp/atysmap.png> (by kaetemi)

world editor probably cant give you what you want.
