Ryzom - Bug # 1191

Status:	New	**Priority:**	Normal
Author:	aquiles	**Category:**	Tools: Georges Qt
Created:	11/14/2010	**Assignee:**	aquiles
Updated:	11/14/2010	**Due date:**	
Subject:	redundant/wrong "faber" element in armor .sitem files		

Description

eg fyros armor icfalb.sitem defines

<STRUCT Name="faber">
  <ATOM Name="Tool type" Value="ArmorTool"/>
</STRUCT>

though .sitem dfn at no points defines a faber element
theres is just a crafting tool element which also gets correctly filled by the parent file _c_al.sitem with

<STRUCT Name="crafting tool">
  <ATOM Name="type" Value="ArmorTool"/>
</STRUCT>

perhaps the first one is just a leftover?
its also not displayed with old georges
the faber element btw is afaik only relevant for the .sbricks

this is occuring in all armor files in the sitem/armor folder
