Subject:	Be able to recreate and successfully use sheet_id.bin with only existing ryzom core data		
Description			
<p>At the moment we are still using an old existing sheets_id.bin file, overloaded with old ryzom data, to append our own sheets. It will be easier to maintain and use, if we are able to completely generate it by ourselves. In addition by doing this we'll find out some missing steps or bugs in the whole content creation process which were hidden by using existing data and id files.</p>
