

Ryzom - Feature # 1313

Status:	New	Priority:	Normal
Author:	TomH	Category:	
Created:	06/06/2011	Assignee:	
Updated:	06/06/2011	Due date:	
Subject:	Admin Panel & PHP 5.3.3		
Description			
Admin Panel doesn't fully work under PHP 5.3.3 because the Admin Panel is using the old PHP Variables.			
PHP Variables Changed:			
from \$HTTP_COOKIE_VARS to \$_COOKIES			
from \$HTTP_POST_VARS to \$_POST			
from \$HTTP_GET_VARS to \$_GET			
from \$HTTP_SERVER_VARS to \$_SERVER			
from \$HTTP_ENV_VARS to \$_ENV			
from \$HTTP_SESSION_VARS to \$_SESSION			
from \$HTTP_POST_FILES to \$_FILES			
Attached there's a .diff patch created from a clean source. Thanks to rti :)			
I'm not sure if this is going to affect anyone using older php versions, <i>might have to discuss it.</i>			

History

#1 - 06/06/2011 12:07 am - TomH

<rti> ok. just saw. isset() could be a way to support both (<http://php.net/manual/en/function.isset.php>)

#2 - 06/06/2011 12:12 am - rti

as naush pointed out:

PHP 4.1 is the first version supporting the new variable names.
