

Ryzom - Bug # 1325

Status:	New	Priority:	Normal
Author:	jiangzixu	Category:	
Created:	06/30/2011	Assignee:	
Updated:	07/04/2011	Due date:	
Subject:	no response here when hit create account menu on login		
Description			
<p>I've check out the source code,under the guide found at http://dev.ryzom.com/projects/ryzom/wiki i successfully compiled the source,configured the server and client on windows 7.After i started the server, there some errors:</p> <ol style="list-style-type: none">1)no response here when hit create account menu on login screen2)try a random account,hit connect, stay on the black screen after show the error tip window3)no response here when hit game configuration menu on login screen there's a message in client.log file, ...can't find ryzom configurator : ryzom_configuration_rd.exe4)when login to admin web using guest account, show a error message Can't connect to the callback server 'localhost:46700'... i checked localhost's listening port, 46700 is ok.why? <p>I've doubt about my compiled version, and download a new binary client version here http://dev.ryzom.com/projects/ryzom/wiki/WindowsBinaries, tried the same situation.</p>

I compared the downloaded server's mysql data to my own mysql data, there's a big different:

using 127.0.0.1 as the address's ip part! but mine is localhost!

now the comiplied server run up.

The guide is here:

•Open up ryzom_default_data.sql in a text editor. Change all occurences of open.ryzom.com in code/ryzom/tools/server/sql/ryzom_default_data.sql to your address (e.g. 192.168.0.1), but remember to keep ports (:4999 etc) as is.
