<b>Subject:</b>	WebTT: raw file views admin_index and listdir are symlinks that don't work on Windows.		
<b>Description</b>			
<p>When you pull WebTT down from Hg on a Linux box Hg will create the symlinks fine for admin_index and listdir but on Windows since it has no concept of symlinks Hg doesn't know what to do, evidently, so it just creates a file called "admin_index.ctp" containing the name of the file it symlinks to (index.ctp in this case.) We need to either tweak Hg to deal with this gracefully or remove the symlinks.</p>
