Subject:	Update the main QUndoStack when a plugin with multiple windows have a QUndoStack for every window		
Description			
<p>Right now on the Translation Manager plugin there is a QUndoStack for all the windows. Normally, we need to have one QUndoStack for one window on the plugin. I was trying to do that, I have created a QUndoStack for every window, group them with QUndoGroup but I don't know how to tell to MainWindow (from core plugin) to update the QUndoStack when I switch the window on Translation Manager. From what I have seen on core/main_window.h a solution is to call this function <i>MainWindow::updateContext(Core::IContext *context)</i> from plugin, and the QUndoStack will get updated.</p>
