

Ryzom - Bug # 957

Status:	Closed	Priority:	Low
Author:	rti	Category:	Build
Created:	06/03/2010	Assignee:	rti
Updated:	07/18/2010	Due date:	
Subject:	Only one Libwww library linked, not all the 20		
Description			
<p>By default, the FindLibwww script just searches for libwwwapp. But libwww consists of 20 small libraries.</p> <p>On some systems, the libraries are "inter linked", so it is ok to just link libwwwapp, the rest will be linked automatically. (Visible with ldd <libname> on linux, otool -L <libname> on mac)</p> <p>On some systems, the libraries are not "inter linked" - for example Mac OS X - resulting in undefined references while linking ryzom client.</p> <p>That's why I added code to the libwww find script which finds all the 20 libs one by one (r245).</p> <p>Now the same issue popped up on arch linux.</p>
