The offending portion is probably the division. Looks like it:

```
(gdb) p ms[j][0]
```

```
$4 = {dotclock = 0, hdisplay = 3840, hsyncstart = 0, hsyncend = 0, htotal = 0, hskew = 0, vdisplay = 1080, vsyncstart = 0, vsyncend = 0, vttotal = 0, flags = 0, privsize = 0, c_private = 0x0}
```

My knowledge of anything else stops here. What's happening? Why are these values zero?

You made a typo. :-)

```
s/pixelCount/pixelsCount/
